A WELL CONNECTED PORT

The Port of Gijón is connected with the National Motorway Network. Its location, on the outskirts of the city, allows the easy access by road, key factor in the logistics of oversized cargo. Port facilities have a relevant railway infrastructure that connects with the National Railway Network. It also has a specific rail container terminal, located at the quayside (TECO).

SURFACE

There are more than 65 Ha. of both covered and uncovered land available for project cargo storage, close to the berthing lines. It is provided with areas prepared for final assembling, welding works, water plugs, electricity plugs, provisional assembling of tents, etc.

Our sheltered waters and excellent maritime access allow the entry of large vessels all year round.

CAPABILITIES

Wide availability of special equipment for the heavy-lift cargo handling.

2 RO-RO RAMPS

CONTAINER LINES

Weekly Container Lines connect the Port of Gijón with more than 250 ports worldwide.
